### A THESAURUS OF PSYCHOLOGICAL INDEX TERMS

Developed by Psychological Abstracts Information Services, this Thesaurus contains about 4,000 terms representing the primary concepts used in psychology. The terms are presented in three different display modes:

The **relationship listing** shows the relationships among concepts that are associated with each other. Broader concepts are related to narrower concepts in a genus-species sense with synonyms and other related terms being indicated.

The **alphabetical listing** presents index terms in alphabetical order.

The **hierarchical listing** displays the terms representing concepts associated with the 17 classification categories used in *Psychological Abstracts*. Terms are presented in descending order according to breadth of concept represented.

The Thesaurus can be used to gain access to the published literature and to communicate psychological concepts more effectively and precisely. This hardcover publication, available in the Fall of 1974, costs \$12.00.

Please note that payment must accompany all orders amounting to \$15 or less except for those orders submitted on institutional purchase order forms.
